From the collection of Richard Powers

Important Note: To get the most benefit from these lessons, read every line slowly and carefully.

We always like to do the things we do well. If we are good tennis players, we like to play that game. If we are expert swimmers we enjoy swimming. So it is with dancing; the better we dance the more pleasure we get out of dancing and the more pride we take in this most healthful recreation. And so to get the maximum amount of pleasure from dancing, we <u>must learn to do it</u> well.

Teaching is not a one-sided proposition. There must be co-operation. The pupils must work WITH the teacher. BOTH must do their parts. No matter how good the pupil, he cannot learn to dance from a poor teacher. On the other hand, <u>there is not a person in the world who cannot learn to dance from a</u> <u>good teacher</u>. Every one was born with the ability to learn. In the thousands of pupils I have taught, I have never found one who could not learn.

First of all, you read the simply written descriptions which tell you exactly, step by step, how to do each movement. The diagrams show you how to place your feet. You will learn to dance in a surprisingly short time, but go slow. Rome was not built in a day. Dancing, like piano playing or singing, cannot be MASTERED in a few short minutes.

#### TO BECOME A GOOD DANCER - ABOUT MUSIC, PARTNERS, ETC. -

#### LEARN ONE STEP AT A TIME.

Before we begin the lessons, let me warn you not to go too fast. It is better to learn to do one thing well than to know how to do many things poorly. To dance well requires practice. So remember that it will pay in the end to practice one step at a time, and do it over and over again until you can do it perfectly. Start on the next step only after you are sure that you have mastered the first step.

By learning one step at a time, it will be extremely simple and you will not be confused. After learning a step, do not throw away the lesson, but save it for future reference. You may forget the step and need it later. This is one of the advantages of learning by correspondence; you can always refer to the written instructions.

I am now going to teach you to be a GOOD DANCER so that you may really enjoy dancing and not merely "get by." I want my pupils to stand out as the best dancers; I have spent many months in perfecting a method which now makes it possible for you to learn easily and quickly.

After you get started you will enjoy learning so much that you will not want to stop until you have completed the entire course.

You need no music. When you have already learned the steps, you will have no difficulty in keeping time to a phonograph or any other music. I have developed a very simple method of teaching one to keep time to music and to distinguish the various dances. It will tell you how to recognize whether the orchestra is playing a Fox Trot, One Step or Waltz.

There is a mistaken impression that learning to keep time to music is difficult. I have taught people 60 years of age to learn to keep time to music although they were never able to even carry a simple tune before they began their lessons with me. The unfortunate belief that one had no sense of rhythm has kept many people from enjoying the pleasures of dancing.

If you want to be a real good dancer and get your share of pleasure and happiness which dancing offers, all I ask is that you follow my instructions as they are given you in "black and white." If you don't understand at first, read them over again. The instructions are always before you for READY REFER-ENCE. This is one of the many advantages of taking lessons by mail. You may soon forget the instructions given you ORALLY by an instructor, but my lessons act as a constant reminder. Because the instructions are WRITTEN, there is no chance of forgetting. You can always refer to them.

#### HOW TO GAIN CONFIDENCE.

#### Lesson No. 1.

Lack of confidence is caused by insufficient knowledge of the subject. When you really KNOW how to dance, you will not be lacking in confidence. To gain confidence in dancing, or in anything else, you must KNOW your subject. As you learn to dance, you will unconsciously acquire ease and confidence. If you are lacking in confidence, it is because you are not SURE of your steps. If you really know how to drive an automobile, you have confidence in your ability to drive in the most congested traffic. But would you have confidence to drive a car if you had never driven before. CONFIDENCE COMES WITH KNOWLEDGE. When you know how to dance, and know that you learned direct from America's recognized dancing authority, you automatically gain ease and confidence.

Leading will spoil a girl's dancing if she does it too much, but it will give her confidence and improve her dancing to a remarkable degree if she leads only part of the time. As long as the girl does not lead more often than she follows, leading will help her dancing because it gives her a sense of balance, poise and a better appreciation of her own part. Look around among your girl friends who lead and you will find that invariably they are the best dancers. Leading gave them confidence. But girls should not lead too often!

#### DANCE ALONE AT FIRST.

The common belief that it is impossible to learn to dance without a partner is absurd. Self balance cannot be acquired if one leans continually upon another. The beginner should learn to dance well ALONE before dancing with a partner. Until the learner can dance properly alone, it would be discourteous to ask anyone to dance. Learn the steps by yourself and after you learn by my method, you will be able to dance with ANY DANCER.

#### DANCING IS A PARTNERSHIP; EACH MUST DO HIS PART.

Dancing may be likened to a business partnership. In business each partner has certain responsibilities; each one is expected to perform certain duties. So it is with dancing. The man is expected to lead; the lady is expected to follow. EACH PART REQUIRES A KNOWLEDGE OF THE STEPS. The man, in order to guide firmly, must KNOW what he is doing. The lady must follow without being led too forcefully. To follow successfully, she, too, must know the steps. Both must be able to dance and ONE MUST NOT DEPEND UPON THE OTHER'S knowledge of dancing.

#### THE CORRECT DANCING POSITION.

#### Lesson No. 2.

Stand erect. Be natural as well as comfortable and not too close to your partner, yet not too far away. At all times, move easily and smoothly. The illustration shows the proper position of the head, arms, hands and body. The lady rests her left hand lightly at the back of the man's shoulder. Her right hand is extended to the side. The arm is not held stiffly, but is bent to form a graceful curve. (See illustration.)

The man looks over the lady's right shoulder. The lady may face as in the illustration, but it is advisable for her to look over her partner's right shoulder.

The man holds his arms fairly high. Hold your partner firmly, especially with the right

arm and hand. Let the lady feel the pressure of your hand at her back (under the shoulder blade, above the waist line), and not have a "jelly fish" hold. The lady has more confidence in you if you hold her firmly. The left arm is bent at the elbow. (See illustration.) In the beginning, dance on the toes and the balls of the feet. Do not let the heels touch the floor.

Do not curl your arm under that of your partner. Fancy holds are out of date.

To look well while dancing, make yourself tall; hold your head up high, chin in, chest out. Dance as though your body were floating through the air. Keep your heels off the floor as much as possible. Keep your legs close together; do not spread them apart. Hold your partner directly in front of you, and not to one side. When you walk forward, step directly toward your partner as though you were trying to step on your partner's feet. Do not try to avoid your partner's feet when going forward.

Do not take two steps in succession with the same foot. When you take a step with one foot, take the other foot off the floor.

Do not slide your feet. Lift them off so that they will not scrape the floor. To slide and hug the floor with your feet is old-fashioned and not conducive to good dancing.

Remember to turn the toes outwardly Do not dance in a pigeon-toed fashion.

#### THE SECRET OF LEADING

#### Lesson No. 3.

The secret of being a good leader in dancing is to know EXACTLY how to do each step, - and then dance in a decided manner. You must be SURE OF WHAT YOU ARE DOING. If you are uncertain as to how the steps are to be done, how is your partner to know?

IF YOU KNOW THE STEPS and can do them well yourself, then guide your partner firmly with your right arm and hand and she will follow if she knows anything about dancing. There is a mistaken impression that the man must guide by pushing and pulling. This is not necessary if your partner is a good dancer. The good dancer never thinks of how he is leading his partner; HE SIMPLY DOES HIS OWN PART WELL. Hold your right hand firmly just below the lady's shoulder blade. You cannot lead well if your hand is too low and if you hold your partner loosely.

Sometimes, when dancing with a partner who is not familiar with your steps, it is necessary to do a bit of guiding. Then you indicate to your partner with your right hand and arm. The left hand does not help very much in leading. For the beginner, it is best not to attempt to lead forcibly as only advanced and intricate steps need forceful guiding. The beginner should learn his own part well and he will find that his partner will follow without any help if she is a fair dancer. It is not necessary to count or tell your partner what you intend to do next. By showing your partner that you really know what you are doing, you gain her confidence. She will follow you readily if she has faith in your ability.

#### HOW TO FOLLOW

#### Lesson No. 4.

The first essential to successful following is to know the steps. How can anyone expect to dance with a man unless she is familiar with the steps he will do?

The second requirement is that the lady step in such a way as to ALWAYS BE READY FOR THE NEXT STEP, and incidentally keep her feet out of her partner's way. This is accomplished by cultivating the proper step. It is most important for the lady to cultivate a long step. You can do it easily and gracefully by STRETCH-ING THE TOES BACKWARD. (See position of lady's right foot in illustration.) Make the toes step backward as far as possible. Whether you go backward, forward, or sideways, MAKE THE TOES LEAD.

Following the leader requires a complete mastery of the basic principles of dancing. The lady must be READY for any and all steps

which her various partners may do. This means that she must train the muscles of her body along certain lines which will enable her to respond readily to the lead of her partner.

In an effort to follow and to be light, girls will often "flop," or in other words, "give themselves up to their partners." This form of relaxing is detrimental to good following as the girl simply throws her weight to her partner and by losing control of her muscles, she becomes heavy. To follow well, a girl must relax, but she cannot make her body supple without first becoming thoroughly familiar with the movements which her partner may do. It is not enough for a girl to simply relax and let her partner literally carry her around. To follow well she must first train the muscles of her body to become thoroughly familiar with the various dancing steps her partner may do. The lady should not lean or bear down heavily on her partner. The man has to hold his own arms up throughout the whole dance, - a period of from three to fifteen minutes. If he must dance for that length of time with someone who leans heavily upon his arms, he will not consider his partner as a light dancer.

When dancing, do not slide the feet, but take them completely off the floor. When your foot is off the floor it is <u>ready</u> for the next step which your partner may take. To be light, dance on the tips of the toes. To follow well, let the man guide you through <u>his</u> movements. Do not, while dancing with a partner, think of your feet or your own steps. Through the lessons you train your feet to know the steps and to dance. Then, when you dance with a partner, trust your feet - not your mind - to follow your partner.

#### HOW TO KEEP TIME TO MUSIC AND DEVELOP YOUR SENSE OF RHYTHM.

#### Lesson No. 5.

(If you can keep time to music it is not necessary for you to read this chapter.)

Everyone was born with a sense of rhythm, but a great many people have failed to fully develop that sense. It is foolish for a person to say, "I have no sense of rhythm; because I do not play any instrument and have never taken music lessons, I have no ear for music."

I have proven conclusively that unless a person is deaf, anyone can learn in a few days, to keep time to music.

1. First of all, the person who wants to develop his sense of rhythm should attend a number of concerts, or if he has a phonograph, to play dance tunes and hum or whistle at the same time the selection which is being played. This may seem difficult at first, but after a while you will enjoy accompanying the music. Hum or whistle for at least fifty tunes. Attend as many dances or concerts as possible and sing all the time.

2. The second step, after you can hum or whistle a tune, is to tap with your hand or foot in time with Fox Trot music. Simply beat time with your foot on the floor as though you were hitting the pedal of a base drum. Each tap takes one second. Keep this up for not less than twenty tunes or until you can successfully beat time with your hand or foot while the Fox Trot is being played. 3. After you have learned to beat time with your foot, attend a dance, or if you have a phonograph, put on a Fox Trot record. While the Fox Trot tune is being played, walk around the room, giving a full second to each step. At the beginning you will find it hard to keep in step, but after you have walked through three or four Fox Trots, you will find it surprisingly easy to keep time and dance to any music.

4. After learning to walk to Fox Trot music, tap with your foot while a waltz is being played. The Waltz count is 1, 2, 3, but tap with your foot only the first beat, and count aloud all three beats of the waltz. These instructions may seem difficult at first, but as you advance and learn the steps they will be amazingly clear and simple. Do not pass a single paragraph until you have mastered it.

#### HOW TO AVOID STIFFNESS.

#### Lesson No. 6.

So-called stiffness is of two kinds. People are often referred to as "stiff" because their muscles are tense. Have you ever driven an automobile? If so, you remember that when you first learned to shift gears you would stiffen up, your muscles would become taught, and you could almost feel yourself in a nervous tension. It is the same with dancers when they first start out to dance. Because the beginner is not yet sure of himself, his muscles stiffen up. By practice, this stiffness will pass away and when the dancer knows the steps, ease and grace will come.

The second kind of stiffness is the result of inexperience. The person who does not know the steps and has not trained the muscles of his feet to dance with ease cannot be anything but "stiff." The muscles of a person's body are stiff until they are loosened up by the proper training. The ballet dancer, even the one who dances as light as a fairy, is stiff when she attemps ballroom dancing if she is not thoroughly familiar with the newest ballroom steps. Each step brings into play different muscles. To become rid of stiffness, one has but to learn to dance the steps and when proficient, ease will take the place of rigidness.

#### HOW TO TELL WHAT DANCE THE ORCHESTRA PLAYS.

There are but three different tempos. The modern orchestras play Waltzes, Fox Trots and One-Steps. Most of the new dances, such as the Conversation Walk, Society Walk, and such dances as the Chicago, Toddle and others, are danced to Fox Trot music. The most up-to-date orchestras play mostly Fox Trots. Occasionally they play a Waltz and a One-Step. Some orchestras very seldom play One-Steps, although this dance is popular in smaller cities. The Two-Step, played only in rural districts, is now danced to One-Step music.

It is easy to recognize the Fox Trot because of its slow tempo. Simply tap your foot at the rate of one tap a second and if the slow tap fits the music, it is a Fox Trot. Remember that most of the dances played are Fox Trots.

The One-Step is about twice as fast as the Fox Trot. If the music makes it necessary for you to tap very quickly, about two taps a second, then you know the orchestra is playing a One-Step.

The Waltz tempo is entirely different from the One-Step or Fox Trot. There are three beats to a waltz measure and the music plainly suggests that you count 1, 2, 3. The first beat of the three is accentuated. It seems louder and stronger than the other two. It is the easiest of the dance tunes to recognize. After you dance a while you will have no difficulty in distinguishing the waltz. Simply count 1, 2, 3, and tap with your foot on the first beat.

#### THE FIVE CORRECT POSITIONS OF THE FEET.

Have you ever wondered why some people's feet look pretty while dancing and others do not? Do you know why some people always get their toes stepped upon even though they may know the steps?

#### It is because their feet are not placed correctly while dancing.

In dancing there is a right way to put your feet on the floor - to step and also a wrong way. It is very easy to do it the correct way because there are only five positions for you to learn.

Below are given in detail the five positions of the feet. Remember that knowing these positions is to know the secret of making your feet look pretty while dancing, walking or standing.

 $\frac{FIRST}{first} \xrightarrow{POSITION:} This is the position to use before starting to dance. The first position is commonly used when you bring your feet together. (See the diagram.)$ 

<u>SECOND</u> <u>POSITION:</u> The feet are apart and the weight rests on only one foot. Note that the toes are turned outwardly.

THIRD POSITION: This position is used in the "Cut" and other steps. The heel of one foot is at the instep of the other foot.

FOURTH POSITION: One foot is <u>directly</u> in front of the other foot. This is the position of your feet when walking. Remember that when walking forward or backward, you must place one foot in front of the other and NEVER spread your feet apart.

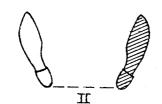

FIFTH POSITION: This is an advanced position. The toes of one foot almost touch the heel of the other foot.

Place your feet as in the illustration. Go through each position a few times until you have memorized them. It is essential for dancing teachers and parents, who teach their children, to be thoroughly familiar with the five correct positions of the feet.

 $\mathbf{\nabla}$ 

THE FIVE POSITIONS OF THE FEET

#### THE LINE OF DIRECTION.

The Line of Direction is the direction in which the dancers progress around the room. While learning it is advisable to get in the habit of always going in the same direction, - the direction in which the dancers progress in the ballroom. Just as it is necessary to observe traffic regulations, it is essential that you observe the proper "Line of Direction." If dancers did not observe the Line of Direction, people would continually collide with one another in the ballroom. All dancers must dance around the room in the same way - along the Line of Direction.

The Line of Direction is the direction you will take while practicing. Note the diagram. Start anywhere and walk around the

room following the arrows. Note that you should stay close to the wall, your <u>right</u> hand within easy reach of the wall. Note again the arrows which show you which way to progress around the room.

No matter whether you go forward, backward or sideways, you always go in the same direction around the room. If you get in the habit of following the Line of Direction and not go "against the grain," you will keep from running into other dancers in the ballroom.

Try this <u>now.</u> Simply begin with the left foot and walk forward around the room. (The lady should practice by beginning with the right foot and <u>walk backward</u> going in the <u>same</u> direction.) Remember that the man's right hand and the <u>lady's left hand</u> should be nearest the wall while walking in the Line of Direction. Be sure you understand what is meant by the Line of Direction before going any further.

#### THE DIFFERENCE BETWEEN THE NEW AND OLD DANCES.

In most of the old dances it was necessary to dance in a certain cut and dried way. Each dance was done in regular sequence. The lady knew approximately what the man was going to do. The men danced with more or less regularity and sameness.

In the new dances, for instance the Fox Trot, there are no set rules as to what steps one may do. Each dance consists of a number of variations or steps, some of which are easier than others. It is not necessary for the man to dance the steps in any regular sequence, but he may execute any of the steps at any time. In other words, the man may lead his partner through any of the steps with which he is familiar.

Each dance consists of about five or more popular variations. We will begin with the easiest and most commonly used steps and gradually lead up to the more intricate steps.

#### THE FOX TROT IS THE EASIEST DANCE.

Among the better dancers, the Fox Trot is by far the most popular dance today. Good dancers prefer the Fox Trot because of its syncopated rhythm. The steps are also very interesting. In the high class ball rooms of New York, such as the Crystal Room at the Ritz Carlton and the Grill Room at the Plaza Hotel, the Fox Trot is played more frequently than any other dance.

Because of the comparative newness of the Fox Trot, many people are of the impression that it is a difficult dance to learn. As a matter of fact, beginners find the Fox Trot the easiest. It is much simpler than the One Step and decidedly easier than the waltz. The steps have stopped changing every month or so and the new Fox Trot is practically standardized. Learn the Fox Trot first because it is the easiest and the most popular dance.

The Fox Trot is easy to dance because the rhythm is delightfully slow. This dance is made up of slow and quick movements. The walking steps are slow -- one step a second -- and the quick movements are twice as fast as the walking steps. As we progress, I will explain each step in detail and it will be extremely simple. You will indeed be surprised at the simplicity of the Fox Trot.

I will talk to you in plain, simple language and shall not adhere closely to technical rules of counting. My sole aim is to make everything as easy as possible.

#### THE FOX TROT WALK.

In the Fox Trot, the man generally walks forward and the lady backward. It is necessary for the man to walk forward in order to see where he is leading his partner. The lady dances backward most of the time. This may seem hard at first, but after she becomes accustomed to it, she will find that it is really much easier to dance backward than to walk forward.

It is most important to learn to walk properly in the Fox Trot. The steps in this dance are very <u>long</u>. Each walking step is given two quick beats of the music. You place the foot forward on the first beat, then rise up on the toes on the second beat. This way of walking gives you a sort of bouncing movement and gives more "life" and "pep" to your walk. Simply step forward with the left, then rise; then step forward with the right and rise. Begin with the left foot and go forward, walking around the room (in Line of Direction), right hand to the wall. At first, exaggerate the movement by bouncing up and down on the toes in order to bring the muscles of the toes into action. Remember that the walk in the Fox Trot is very slow. Each step is given a full second. In the beginning, do not be afraid to exaggerate the bouncing motion. Hop up and down. Later, you can modify the action.

The lady begins with the right foot and takes long steps <u>backward.</u> Her toes must go as far back as possible. She should practice an extremely <u>long</u> step. The lady who has learned to take a long step can follow a leader better than the one who is accustomed to taking a short step. By taking a long step, the lady has her feet out of her partner's way and she also has it in readiness for the next movement. (See diagram.)

Lift your feet slightly off the floor when walking. Do not let them drag or scrape the floor. Do not let the heels touch the floor while dancing. You may take liberties after you become expert, but at first, dance on the toes or the ball of the foot. Move naturally, easily and with comfort. Practice taking <u>long,</u> <u>slow walking steps</u> around the room for about 30 minutes.

This is wrong because the toes do not go back far enough when walking backwards.

This shows the correct way of placing the foot when walking backwards.

#### THE FOX TROT AND TWO-STEP.

The first steps, sometimes called the basic steps, in the Fox Trot, are exactly the same as the old Two-Step.

The Two-Step is no longer danced in the ballrooms of the large cities. For those who want to learn to dance the Two-step, <u>simply learn the Fox Trot</u>, and leave out the walking steps.

The person who has not danced before, or whose knowledge of dancing is limited, will do well to study very closely the first lessons in the Fox Trot. The <u>Two-step is the basis of the simple Fox Trot.</u>

In the Two-step the lady's part is exactly the same as the man's. Therefore, the descriptions to follow are also to be used for the lady.

#### Man's Part

# START HERE

Begin with left foot and go forward, follow the numbers in the foot prints. The right foot is shaded.

# THE CHASSÉ

#### MAN'S PART

This step is one of the standard and most popular steps of the Fox Trot and One Step. It is sometimes referred to as the "Cut Step" because on the fourth step the man draws' his right foot up to the left.

Here is how the step is done:

- At the "start" stand erect with your heels together, Then—
- 1. Begin with the left foot and step directly forward taking an ordinary walking step.
- 2. Walk forward on right foot.
- 3. Walk forward on left foot.
- 4. Draw the right foot up to the left, placing weight on right foot. That's all.

Follow the numbers in the foot-steps.

If you want to repeat the step, begin with the left foot.

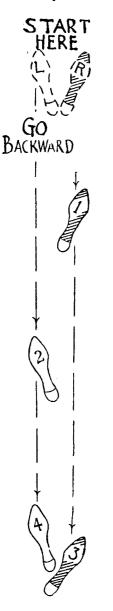

The Chasse' is one of the most popular steps in the Fox Trot, but it may also be used in the One Step and the Waltz Canter. At first it is advisable to learn to dance the Chasse' to Fox Trot music. After you learn it in the Fox Trot, you will have no difficulty in dancing it to One Step or Waltz music.

The walking steps in the Fox Trot are long and slow. Each walking step takes a full second. The man generally walks forward so that he can see where to go. If the man dances backward he may collide with other couples on the ballroom floor.

The Fox Trot is the easiest and most popular dance. It contains about ten standard variations and many novel steps. Because of its delightful rythm and its syncopated time, the Fox Trot has become the universal dance in every English speaking country. It is interesting because of its many variations,—steps which relieve the monotony of dancing the same thing all the time.

#### Lady's Part

Begin at "start" and go backwards with right foot (shaded). Follow the numbers in the foot prints.

# THE CHASSE

#### LADY'S PART

The lady's part in the Chasse', which is one of the standard steps of the Fox Trot and One Step, is just the opposite of the man's part.

Start anywhere. Stand erect, with your heels together. Remember that the lady goes backward when the man goes forward.

- 1. Begin with right foot and step directly backward.
- 2. Walk backward on left foot.
- 3. Walk backward (long step) on right foot.
- 4. Draw the left foot up to the right placing weight on left foot. That's all.

Follow the numbers in the foot-steps shown in diagram. If in doubt begin at the top and read it again.

#### Study the Diagram Carefully.

In the Chasse', as in other steps of the One Step and Fox Trot, the lady walks backward. To dance backwards may seem difficult at first, but with a little practice you will find it even easier than going forward.

Although the Chasse' may also be used in the One Step and the Waltz Canter, it is most popular in the Fox Trot. Practice it going backward around the room, remembering to take long, slow steps. Each step is given a full second.

Remember to dance on the toes. Do not let your heels touch the floor.

You will find that the Fox Trot is the easiest and most popular dance of all. It is fascinating because of its many interesting variations. In our complete course, I have devoted considerable space to teaching the lady to follow any partner. When one has mastered the basic principles of dancing, it is easy to follow even the most difficult steps which any man can do.

#### WHAT IS THE TWO-STEP?

Remember that a Two-step is simply two sliding steps.

Beginning with the left foot, slide sideways two steps with the left foot. This you count:

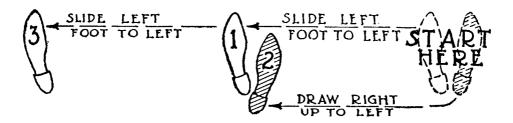

1. slide left foot directly to left;

2. draw up right foot;

3. slide left foot to left, weight on left. (Take right foot slightly off the floor.)

This completes a Two-step to the right. (See illustration.)

## THE TWO-STEP TO LEFT

The second part, two slide to right, is taken with the right foot:

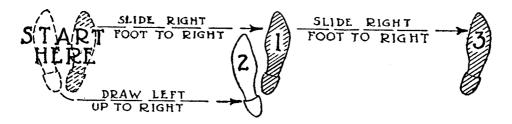

1. slide right foot to right;

2. draw up left foot to right;

3. slide right foot to right, weight on right. (Take left foot off the floor.)

This completes a Two-step to the right.

## THE TWO-STEP TO RIGHT

To repeat, begin with the left foot and do the first part. Practice two slides to left and two slides to right for thirty minutes.

#### THE FORWARD TWO-STEP IN THE FOX TROT.

NOTE: In these instructions I will say "slide" to indicate a sidewise movement. In the modern dances you do not actually <u>slide</u> or <u>scrape</u> the floor. Lift your feet slightly off the floor. The word slide will mean "step sidewise." Each step is about 18 inches long.

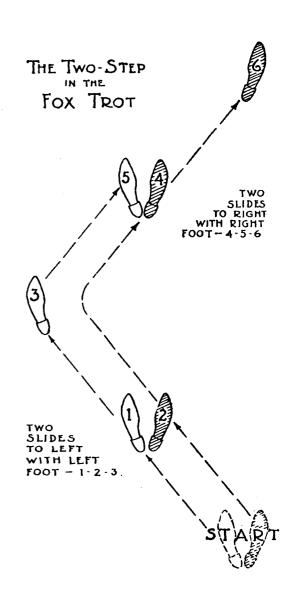

Note that in the first Two-step (count 1, 2, 3) you go toward the <u>upper left hand corner</u>. Then you Twostep toward the <u>upper right</u> hand corner (count 4, 5, 6.) In this way you advance <u>forward</u> instead of remaining on the same spot as in the previous lesson.

(Note carefully that the lesson given on the preceding page is merely the basis of the Two-step and will not be used when dancing with a partner. It is a foundation step which should be practiced until you can do it rapidly so that the Forward Two-step and following lessons will be easier.)

The Forward Two-step is the easiest and most commonly used step in the Fox Trot. If you <u>master</u> this step, the turns and other steps will be comparatively simple. The count is exactly the same as the Two-step given on the preceding page.

- slide left foot diagonally to left (toward upper left hand corner).
- 2. draw right foot up to left;
- 3. slide left foot again to left, weight on left. This completes the first Twostep.
- 4. slide right foot to right;
- 5. draw left foot up to right;
- 6. slide right foot again to right, weight on right. This completes the second Twostep.

Repeat the entire Forward Two-step of six counts and practice this step going around the room in the line of direction. Spend at least an hour.

Х

#### THE TWO-STEP BACKWARDS IN THE FOX TROT.

This movement is just the opposite of the Forward Two-Step. It'is the step the lady takes when the man goes forward.

- slide right foot diagonally backward and to the right;
- 2. draw left foot up to the right foot;
- 3. slide right backward again, in the same direction as first step. This completes a Two-step.
- slide left foot diagonally backward to left;
- 5. draw right foot up to left foot;

6. slide left backward to left.

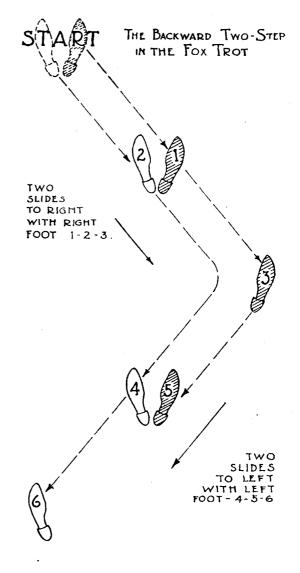

Study the diagram carefully and do each step slowly at first, then gradually faster and faster until you can dance the backward Two-step without counting.

Confidence is the very basis of achievement. There is a tremendous power in the conviction that we can do a thing.

You cannot build without a foundation. The Forward and Backward movements are the beginner's foundation for the Fox Trot. The steps to follow will be extremely simple if you know <u>perfectly</u> the steps described in the foregoing paragraphs.

Ask yourself: Do I know that a Twostep is simply two slide steps taken sidewise? Do I know that the forward Two-Step consists of a Two-step to the left and a Two-step to the right? Do I know that the backward Two-step is the counterpart of the Forward Two-step and that when the man does the Forward Two-step the lady does the backward Twostep?

Do I know that the lady always begins with her right foot? With which foot does the man begin?

### HOW TO FOLLOW

Ten Exercises which Teach You the Foundation Movements in Ballroom Dancing. These Exercises Will Develop Grace, Poise and Strength

Early in life I showed faint signs of having a sense of rhythm, which is quite natural in children, but my mother thought I was a child wonder and exclaimed, "Ah! He is musical! We will buy him a piano and he shall have music lessons."

A few days later the piano arrived and behind it trailed the man who was to make me a seventh wonder. The piano teacher was not a novice at the game and before many lessons he gave me up as a hopeless case.

"You read music unusually well and you have a good sense of rhythm," he said, "but you will never make a good pianist. A natural gift of rhythm and a reading knowledge of music do not qualify one as a pianist. If you wish to learn to play the piano, you must develop the muscles of your fingers by constant exercise. It takes hours and hours of practice before control over the fingers is gained. Do you suppose Paderewski learned to play the piano by spending his time on the baseball field?

"You are lacking in muscular co-ordination. Your knowledge of music is all in your head; your fingers, they are dumb. I see that you are not willing to practice the exercises which I have given you and therefore cannot hold out any hope for you as a pianist."

And that little speech ended my career as a great musician.

Sometime after that I took up swimming. A kind friend showed me a number of the principal strokes and I made a good job of committing to memory the various swimming movements before I went near the water. Never did I learn my studies so well as I memorized the various underhand, overhand and other strokes in swimming. In my mind I was a perfect swimmer and I approached the water with the confidence of a professional. With absolute disgust did I look upon the people who swam in shallow water; for my own part, I chose that end of the pool where the water was at least ten feet deep.

After rehearsing in my mind the underhand stroke, I plunged into the deep water. Immediately I went to the bottom! I tried every stroke I knew, but somehow they refused to work. In the meantime I stayed at the bottom of the pool. When I realized that I had no means of reaching the surface, I cried for help, but that availed me nothing and filled my mouth full of dirty water. Thanks to one of the lifeguards, I am here to tell the tale.

I mention the incident of my failure to learn to swim and of my hopelessness as a pianist because they brought home very forcibly the fact that if we are to learn to do anything with our hands or feet, we cannot be content with simply having in our heads a knowledge of how it is to be done; we must get that knowledge down to our hands or feet by intensive training of the particular muscles which we wish to develop.

By constant practice we form a connecting line between our head and our hands or feet.

Having learned this lesson by sad experience, I am now putting it into practice in the teaching of social dancing.

Before teaching people to do the actual steps in a dance like the Fox Trot, I first give them a series of exercises. These exercises are the basis for infinite ballroom steps and may consist of movements which at first may seem entirely foreign to the ballroom dance. The object of the exercises is to train the muscles which are used in dancing.

After the pupil has brought the required muscles under control, it is a simple matter to learn the details of the dance. In most instances the pupil is capable of following her partner immediately after learning the exercises, which, by the way, bear a close relationship to physical culture exercises.

In my experience with teaching social dancing by giving a series of exercises, I have found that many of these exercises, in addition to teaching the person to dance, also serve as aids in developing the figure to the ideal form. That these exercises also make one graceful goes without saying.

Let us now consider some of these exercises in relation to those dancing steps for which they constitute the logical preparation, and for which they develop the co-ordination and technique necessary if one would do these dances well.

NO. 1

In following (see photos 1-A and 1-B) it is essential for the girl to dance so that her feet will always be out of reach of her partner's and at the same time she must dance with ease and without pulling away from him. The secret of knowing how to live through a dance and come out of the struggle with shoes untouched is to know how to walk.

For the lady there are two ways of dancing backwards: the ordinary way is to simply walk backwards, but the good dancer does more than that; when she places her foot in back, she does it in such a way that it looks pretty and it will not be stepped upon.

Place the feet in what is called the First Position in dancing; the heels together and toes turned out. Move the right foot as far backward as it will go and at the same time stretch the toes well back so that only the front tip of the foot touches the floor. There should be a straight line from the hip to the big toe. Now, bring the foot back to first position. Repeat the same exercise with the other foot.

This may be done to onestep music, In this series of pictures are given specific exercises to develop the muscle-control and co-ordination needed for certain ballroom steps. In each case the exercise is identified with a companion photograph showing the particular step referred to. Photos 1-A and 1-B illustrate the correct method of walking backward, as described in the text, so that the foot

In the text, so that the foot will look pretty and will not be stepped upon. The photographs were posed by Miss Mary Faith Yow, one of the best dancers of the South, and Mr. Murray. Photos 2-A and 2-B. This exercise is intended to correct the position of the head so as to avoid a slovenly appearance while dancing. If you hold the head upward and backward while practicing this exercise, you will be assured of good position on the floor.

#### No. 2

So often people who are really good dancers make a bad appearance on the ballroom floor that I am tempted to give them an exercise which will remedy the cause of looking slovenly while dancing. It is largely a matter of the position of the head.

The exercise in photo 2-A looks easy, but it's not. Try and do it. Ten attempts will make you feel as though you've done a hard day's work and you will perspire more freely than after running a mile in a hot July sun. But you will be a better dancer for it. This exercise will make you hold your head up high, (see photo 2-B), and it will have the effect of strengthening your shoulder muscles as well as the muscles of your chest. The photo -

graph of the couple shows the correct position of the hands and arms.

Begin each exercise by standing erect, with hands at sides and heels together. Then assume the position as shown in the illustration.

#### NO. 3

"I could do the steps if I only knew what my partner would do next. How can I know?" I have been asked this question almost a million times and always I think of the time I asked a doctor to cure my cold. He replied that if he knew how he would surely cure his own. So it is with a man's dancing; he himself often does not know what step he will do next and, of course, the long-suffering partner must follow. The poor girl who has no choice in the matter can do but one thing; she must train her feet to always be ready for whatever steps the man takes a notion to do.

A knack of stepping backward quickly, and always having the feet slightly off the floor, are two of the best ways of being prepared for your partner. The exercise shown in Photo 3-A has been designed with these special points in view. That it is also of help in various ballroom steps, is incidental. The exercise needs no further description than a glance at the photograph. Just remember to kick backward very quickly. This exercise should be done first with one foot and then with the other. Fox Trot music is best if you would have that luxury. Begin with heels together. Kick the right foot up at the back; then bring the heels together.

Photos 3-A and 3-B. The fair dancer should train her feet to be ready for whatever steps the partner takes a notion to do. This quick backward kick is the best training to prepare one to get her feet out of the way in a step like this. Here is an exercise upon which most of our steps are based. It also furnishes the groundwork for the Two-step and many popular variations, and is the best exercise to use in training the toes to turn outwardly. Place your feet in a position similar to Miss Yow's, in Photo 4-A. Step backward with the right foot, then draw the left foot up to the right. Step back again with the right and draw the left up again.

right. Step back again with the right and draw the left up again. Repeat this movement around the room, bearing in mind that the toes must be well turned out.

This same exercise may be practiced with the left foot leading. Simply step backward with the left foot and draw up the right foot in front of the left. Notice that in stepping backward the girl uses only the tips of her toes. How much better looking is her foot than if she had put down the whole foot or even the ball

of her foot! Photo 4-B shows how it works out in dancing.

The fox trot music is most suitable and the steps are done very quickly.

Photos 5-A and 5-B. An exercise for acquiring the side-step, which is the second step in a waltz measure. This is, to many people, a stumbling block.

Photos 4-A and 4-B. This exercise furnishes the ground-work for the two-step and many popular variations, and for training the foes to turn out. A detailed description is given in the text.

#### NO. 5

The test of a good dancer is the ability to do the side steps. One may often dance well when taking a forward or backward step, but the side movement frequently acts as a stumbling block. It is because of the difficulty of doing the side movements that so many people naturally fall into the habit of doing the two-step, when supposedly they are waltzing. That the second step in each waltz measure is a side step proves the importance of this movement in social dancing. See Photo 5-B.

The best way of learning this most difficult of steps is by simply extending one foot to the side and raising it as high as possible, as in Photo 5-A. To gain a good sense of equilibrium, keep the body erect and raise the hand opposite. Practice this exercise using one foot ten times, then give the other foot a chance. Use either waltz or fox trot music. Photos 6-A and 6-B. This exercise will prepare you for those steps in which the bending of the knee is the characteristic feature. Bend as far down as possible, and thereby gain the strength and control which will enable you to do these steps gracefully. If you like steps which are more or less extreme, or if your partners are men who do not mind bending the wicked knee, this exercise will come in handy.

To start with, stand up straight and in a natural position. Take a long forward step with your right foot and throw the weight on that foot; at the same time bend the right knee, as in Photo 6-A. Keeping the body erect, bend as far down as possible. Then, rise and resume your natural standing position. Without moving out of place, face about and step forward with the left foot, placing the weight on that foot. Notice that while one foot is bent, the other remains perfectly straight. Also note that the toes are well turned out. In practicing this exercise to music, allow three beats of the waltz for this downward movement and the three beats to rise into place again.

Photo 7. Should one dance on the heels, balls of the feet, or the toes? The answer is, the tips of the toes only. The toes of the two partners should be placed exactly opposite each other, not sandwiched between.

NO. 7

Perhaps the most common question in dancing is: "Shall I dance on my heels, the balls of my feet, or shall I dance on my toes?"

There is but one answer. Dance on the tips of your toes only! Dancing on the toes not only makes one lighter but it makes one look a hundred percent better. Another question asked frequently, is: "How shall I place my feet?" Should they be placed to the side of my partner's or in between one another?" Both ways are wrong. The man's feet should be placed directly in front of the lady's and when the girl walks backward, the man must follow in her footsteps. (See Photo No. 7.) When the man goes backward, the lady should not be afraid of stepping on her partner's feet, but she should step directly toward him. Why is it that the champion walker finds a snag tries walking forward, or rather toward her partn has walked forward, while the man danced backward, ing toward her partner gives one a most uncomforta

It is because walking on the street and walk ner bring into play different muscles. In dancing, only goes forward but she is called upon to raise front, a mean trick on the man's part to make it ne it calls for uncommon ability and grace.

A little practice doing the exercise shown in Photo 8-A will go a long way in teaching one to follow in forward movements, as shown in Photo 8-B. Without bending the body forward, raise the foot in front until it is parallel with the floor. Keep in mind that the toes must turn downward and not upward. To develop your dancing poise, hold your foot up in front for five seconds, then lower it slowly. Do it without music.

#### NO. 9

At the same time that we practice the exercises of the feet, it is well to give the arms and hands some work to do, for not only will the arms and hands become more graceful, but the exercise will strengthen them. This last is most essential if you would be a light dancer. Too often a girl seems "heavy" simply because the upper part of her arms are weak and their weight rests upon the man's arms. The man has his own hands to hold up; any additional weight may make dancing a bore rather than a delight.

The exercise shown in Photo 9-A, besides being useful in following, has a direct bearing on the Kick-up Step in the College Rock, as shown in Photo 9-B. Lift the right foot at the back, raising it as high as possible. At the same time bring the left hand up in front and the right hand behind. Hold this pose for a full second, then slowly lower the hands and feet to the original position. Always let the wrists lead when moving the arms and hands.

Repeat this exercise by raising the left foot and right hand. The waltz music is best for practicing this exercise.

#### No. 10

Another good exercise, one used in teaching ballet dancing, is to raise the foot in front, and while it is up high, carry it sideways and then to the back, holding it up high at the back before lowering. Photos 9-A and 9-B. This exercise is important if one would be a light dancer. She should not expect her partner to carry her. The kick-up step shown, is used in the College Rock. The exercise is carefully described in the text. the moment she er? Any girl who knows that goble feeling.

ing with a partthe girl not her foot in cessary, because

Photos 8-A and 8-B. One of the greatest difficulties a girl experiences, is in walking toward her partner, being compelled to raise her foot in front. This exercise, described in the text, will give her the control and snap desired.

#### FOUR WALKING STEPS AND THE TWO-STEP.

We will now combine the walking steps with the Two-step. The man will walk forward 4 steps then take the Forward Two-step, while the lady walks backward 4 steps and does the Backward Two-step.

<u>Man's part:</u> Begin with the left foot and walk forward four long slow steps. Each walking step in the Fox Trot takes a full second.

Note: LF means left foot; RF means right foot.

Walk forward: 1 LF; 2 RF; 3 LF; 4 RF.

Then do the Forward Two-step. (See description of the Forward Two-step if you are not already familiar with it.) Repeat, beginning with walking steps.

Lady's Part: Begin with right foot and walk backward four long slow steps. Each walking step takes a full second.

Note: LF means Left foot; RF means Right foot.

Walk backward: 1 RF; 2 LF; 3 RF; 4 LF.

Then do the Backward Two-step beginning with right foot. (See description of the Backward Two-step if not already familiar with it.)

• • • • • • • • • • • • • •

To repeat the FOUR WALKING STEPS AND THE TWO-STEP, the man begins with the left foot and the lady begins with the right foot. At least an hour should be spent practicing this step.

The Two-step is made up of three steps; slide, draw, slide. For convenience, we count it 1, 2, 3. Some teachers count a Two-step as 1 - AND-2. Either way is correct. The word "and" is often confusing, therefore, we will continue to count a Two-step as 1, 2, 3.

Remember that there is a slight pause after you have taken the third step in the Two-step; also after the sixth step.

Caution: Do not go any further until you are positive that you are thoroughly familiar with all the information in the foregoing lessons. Begin at the first page and read carefully all information to be sure that you have not missed anything. This is a very popular step in the Fox Trot and is made up of a Two-step, followed by one long slow walking step. Before beginning the Two-and-One, however, four walking steps are taken. (In the Fox Trot it is advisable to take four walking steps before beginning a new step.)

Man's Part: Begin with the left foot and walk four long steps forward, 1, 2, 3, 4.

Take a Two-step (two slides) to the left with the left foot, counting it 1, 2, 3. (Slide LF to left, 1; draw RF up to left, 2; slide LF to left, 3.)

After taking the Two-step as described in the paragraphs above, walk forward one long slow step with the right foot. That's all.

Repeat the Two-and-One four times in succession, but when doing the step after the first time, the four walking steps are not used. Repeat the Two-and-One by simply doing the Two-step, then take one long slow walking step forward.

Lady's Part: Her part is just the opposite of the man's. Remember that it is advisable, in fact necessary, for her to know the man's part in order to be a really good dancer.

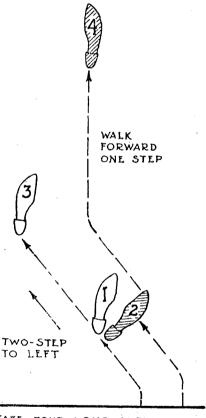

Begin with the right foot and take four long slow walking steps backward before doing the Two-and-One.

Begin with the right foot, take a two-step (two slides) to the right.

Then walk backward one long step with left foot. That's all.

Repeat the Two-and-One step four times in succession. Remember to take long steps and point the toes outwardly. THE TWO-AND-ONE

A TWO-STEP AND ONE WALKING STEP

TAKE FOUR LONG SLOW WALKING STEPS FORWARD BEFORE TAKING THE TWO-STEP TO LEFT

#### THE THREE SLIDE STEPS IN THE FOX TROT.

The Lady's Part is exactly the same as the Man's.

A slide step is simply a sidewise step. It is the same movement as is used in the Two-step. You will remember that a Two-step is simply two slides to the side, either to left or right.

In the following combination of steps, we will take three slide steps. This time we will count only the steps taken with the foot which leads. For instance, if you are sliding sidewise to the left, the left foot leads. Therefore, we count only the steps taken with the left foot. taken with the right foot will be counted as "AND." The steps

THREE SLIDE STEPS TO LEFT: Begin with the left foot and slide it side-wise to the left, count 1;

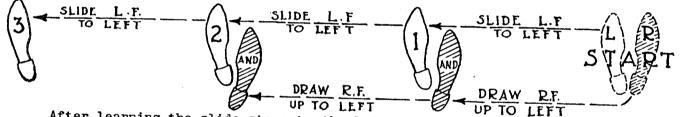

draw the right up to the left foot, counting "AND;"

slide left foot again to left, count 2;

draw right foot up to left, count "AND;"

step sidewise again to left, count 3; placing the weight on left foot. (The right foot is off the floor.)

THREE SLIDES TO LEFT

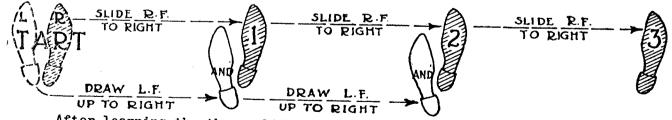

After learning the slide steps to the left, practice taking the slide steps to the right. Begin with right and count the steps taken only with the right foot. The steps taken with left foot are counted as "AND," when taking the sliding steps to right.

THREE SLIDE STEPS TO RIGHT: slide right foot to right, 1; draw left foot up to right, count "AND;" slide right foot to right, 2; draw left foot up to right, count "AND;" slide right foot to right, 3. Weight o

Weight on right.

# THREE SLIDES TO RIGHT

After learning the three slides to the left and then the three slides to the right, practice both for about ten minutes. First take three slides to the left, then slide back three times to the right. Remember that the above is a foundation step only and acts as a basis for the following steps.

#### THE WALK AND SLIDE COMBINATION IN THE FOX TROT.

THREE SLIDES TO RIGHT

WALK FORWARD

THREE

SLIDES

TO LEFT

WALK FORWARD

TWO STEPS

BEGIN WITH

START

TWO STEPS

BEGIN WITH RIGHT FOOT

After mastering the slide steps, put them in practice by combining walking steps with slide steps. The following combinations are popular variations in the Fox Trot. They are not only easy to lead and to follow, but they are easy to learn and to teach.

Two Walk and Three Slide Steps.

FIRST PART: The man begins with his left foot. Walk forward two long slow steps, LF 1; RF 2;

Then take three slide steps sidewise to left with left foot, progressing diagonally toward the upper left hand corner as in the diagram.

<u>SECOND</u> <u>PART:</u> Begin with <u>right</u> foot and take two walking steps forward, RF 1; LF 2;

Take three slide steps diagonally forward to right with right foot. (See diagram for direction of movement.) Remember that slide steps are taken sidewise.

Practice for 30 minutes going in the Line or Direction.

THE LADY'S PART is just opposite to that of the man's part. She begins with her right foot and walks backward. The count is:

Slide three steps to right. (See diagram for direction of movement.)

Slide three steps to left.

NOTE: For a detailed description of the slide steps, see instructions on "The Three Slide Steps in the Fox Trot."

#### THE THREE SLIDES AND ONE WALKING STEP

Another popular sliding step combination is made up of three slide steps to the left, followed by one long slow walking step straight forward.

MAN'S PART: Begin with left foot, take three slides diagonally forward to left, count 1- AND -2- AND- 3.

Then walk forward one slow step with right foot.

Repeat, beginning with left foot and take three slides to left.

Then walk one slow step forward with right foot.

NOTE: Before doing Three Slides and One Walk Step for the first time, take four long slow walking steps. It is advisable to take four slow steps in the Fox Trot before beginning a new step. In this way changing from one step to another is made easy. To go from one step to another, simply complete one variation and then walk four long slow steps before beginning another variation.

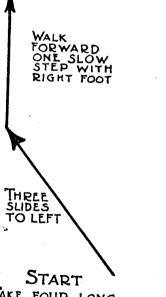

The sliding steps, taken sidewise, should be done smoothly and without hopping. The steps should be fairly long and the toes must always lead. Do not let your toes turn inwardly.

Practice for 30 minutes, going in Line of Direction.

LADY'S PART: Begin with right foot, take three slides diagonally backward to right, count 1-AND -2- AND- 3.

Then walk backward one slow step with left foot.

Read the man's part and practice for 30 minutes. Remember to turn the toes outwardly. To be light, dance on the tips of your toes. Make yourself as tall as possible and do not forget to take long steps. When walking backwards lift your feet slightly off the floor. The lady who is only a fair dancer should keep her arms outstretched at the sides while practicing. This developes the muscles of the arms and enables the lady to easily hold her arms up when dancing with a partner.

Take four long slow steps before doing the three slides

#### ADVANCED STEPS IN THE FOX TROT

The following steps should not be attempted until one has mastered the foregoing steps in the Fox Trot. The one who has danced for two years or more will find the Advanced steps especially interesting.

#### The Syncopated Steps

In the following lessons we will take up some combinations of slow and fast steps, or, walking and running steps. The quick or running steps are known as syncopated steps because three steps are taken to four beats of the music; you take three quick running steps, then pause on the fourth beat.

#### Two Walking and Three Running Steps

The syncopated steps are especially helpful to the lady in following. Practicing these steps teaches her to step quickly, a decided asset to one who must change her step rapidly in order to follow her partner. Learning the man's part, as well as her own, will do much to teach the lady to follow in the syncopated as well as other steps.

MAN'S PART: Begin with left foot.

د.:

First part: Walk forward two long slow steps, LF 1; RF 2; Run forward three long quick steps, LF 1; RF 2; LF 3.

Note: The running steps are twice as fast as the walking steps.

Pause for a half second at the end of the third running step.

The running steps are counted, 1, 2, 3, pause.

Second part: Begin with right foot, walk forward two long slow steps, RF 1; LF 2;

Run forward three quick steps, RF 1; LF 2; RF 3. That's all.

LADY'S PART: Begin with right foot.

<u>First part:</u> Walk backward two long slow steps, RF 1; LF 2; Run backward three long quick steps, RF 1; LF 2; RF 3.

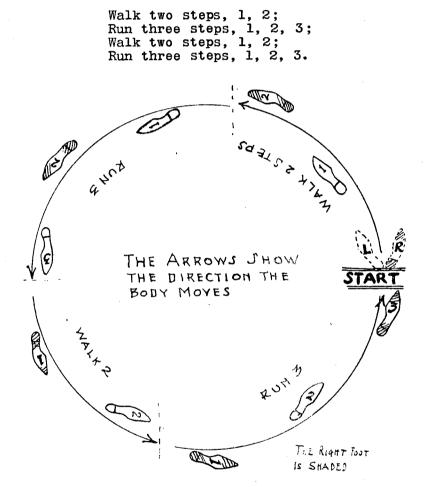

Note: The running steps are twice as fast as the walking steps, otherwise there is no difference in movement. Remember to pause one-half second at the end of the third running step.

<u>Second part:</u> Begin with left foot and walk backward two slow steps, 1, 2. With left foot, run backwards three quick steps, 1, 2, 3, pause.

#### THE SYNCOPATED LEFT OR REVERSE TURN IN THE FOX TROT

This turn is made up of the same number of steps as the Two Walking and Three Running Steps given in the preceding lesson. If you have mastered the preceding lesson, the turn is very easy. You simply do the same steps and instead of going straight forward in the line of direction, you do the steps going around in a circle about six feet in diameter.

Study the diagram. Begin at the words "START" and follow the directions in the illustration.

#### THE SYNCOPATED RIGHT TURN IN THE FOX TROT.

This turn is exactly the same as the Left Syncopated Turn with the exception that you turn to the <u>right</u> as you take the steps. The count is the same. The man begins with his left foot. The lady begins with her right.

When doing the right turn, begin at the left side and turn toward the right. An easy way to distinguished left from right is to look over the left shoulder when doing a left turn.

#### THE BASIC PRINCIPLES OF WALTZING.

The Waltz is universally recognized as the most beautiful ballroom dance ever conceived. It came into popular favor internationally in 1812 and since then it has endeared itself to millions of people.

The Waltz music has a most delightful rhythm. Its tempo is very plainly marked and therefore easy to dance.

The actual waltz step has become so popular that it is now also the basis for most of the steps in the Fox Trot and One Step.

It is a recognized fact that people who learn to waltz correctly, are the most graceful dancers and can learn other dances more readily than people who have not had the advantage of the waltz. For people who have danced the waltz before, it is essential that they learn the Waltz as here given as these same steps are used in various ways in the Fox Trot and other dances.

It is safe to say that more than half the people dance the Two-Step in the belief that they are dancing the Waltz. This is due to the fact that a great many of the teachers of a few years ago did not really know the Waltz and taught the Two-Step instead. This they called the Two-Step-Waltz. Also, a great many people who learned by themselves, - those who "picked up" dancing, - picked up the Two-Step, thinking that they were learning the waltz.

THE REAL WALTZ is a smooth round movement. The Two-Step is a straight movement and the turns are made sharply. However, we shall not discuss in this chapter the difference between the Waltz and the Two-Step. After you have learned both, they will be very plain to you and you will have no difficulty in telling one from the other.

The Waltz is recognized as the foundation of all ballroom dancing. It is, therefore, essential to go very slowly and practice faithfully while learning this most important dance. Build a good foundation and you will always be a good dancer. The one who lays a good foundation in dancing never forgets.

Do not be content with simply learning how to do the steps; each movement should be practiced until you can do it very rapidly and almost mechanically. Practice each step until you have perfected it to such an extent that you do not need to count or even think of your feet. When you waltz with a partner you will not have sufficient time to think of the step.

#### THE FORWARD WALTZ STEPS.

In the Waltz the lady's part is <u>exactly</u> the same as the man's.

The waltz is made up of two principal movements. The forward waltz and the backward waltz steps. From these are derived the turns and all other variations in the waltz.

In this lesson we will take up the Forward Waltz Step, which is made up of two single waltz steps of three counts each.

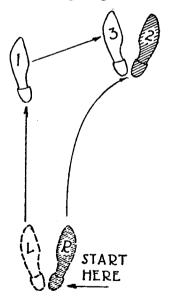

First part of the Forward Waltz Step:

#### FIRST PART

of the Forward Waltz Step

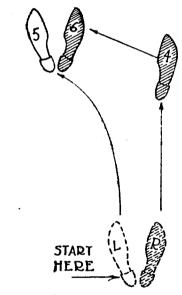

- 1. Begin with left foot and step directly forward, weight on left foot.
- 2. Step diagonally forward to right, placing weight on right foot; (see illustration).
- Draw left foot up to right foot, weight on left.

That's all. Simply follow the numbers in the footprints. Master this part before going further.

SECOND PART

of the Forward Waltz Step

Second part of the Forward Waltz Step:

(a continuation of the first part).

In the second part of the Forward Waltz step, you begin with the right foot, and go forward. Here's how to do it:

- 4. Step directly forward with right foot, weight on right.
- 5. Step diagonally forward with left, going to left, placing weight on that foot;
- Draw the right foot up to the left, weight on right. That's all.

NOTE: Study each part very carefully. Do not attempt to learn too quickly. Repeat the first part at least ten times before taking up the second part. The second part begins with the right foot. Remember that when you take a step, place the weight down on that foot and take the other foot off the floor.

# THE FIRST AND SECOND PART OF THE

#### FORWARD WALTZ STEP COMBINED.

Here is the count for the complete Forward Waltz Step: (This is the same as the first and second part as given on the preceding page).

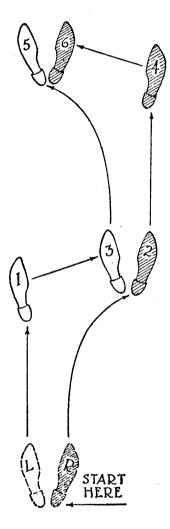

- 1. Step forward on left foot;
- 2. Step diagonally forward to right;
- 3. Draw left up to right, weight on left;
- 4. Step directly forward with right;
- 5. Step diagonally forward to left;
- 6. Draw right foot up to left, weight on right.

Practice this step around the room going in the line of direction. Study the diagram carefully and follow the footprints which are numbered. The right foot is shaded.

## WALTZ TO MUSIC.

If you haven't a phonograph, go to a music store or to a friend and ask to have a waltz played slowly. Hum or whistle with the music and then simply count 1, 2, 3, and tap with your foot on the first beat of the 1, 2, 3. Accentuate the first beat by counting it louder: count ONE - two - three. Listen to the music until you become familiar with waltz time, which is always counted  $\underline{1}$ , 2, 3.

Dance the Forward Waltz step beginning with the left foot forward. As you go through the steps, sing or hum, counting ONE - two - three. Remember that the <u>first</u> of every <u>three</u> beats is counted louder. Count: <u>ONE</u> - two - three - <u>FOUR</u> - five - six.

# THE WALTZ MOVEMENT BACKWARD.

The Backward Waltz movement is just the opposite of the Forward Waltz movement. When the man does the forward movement, the lady does the backward Waltz.

- 1. Step backward with right foot:
- 2.
- Step back, slightly to left, with left foot; Draw right foot up to left; weight on right; 3. (See diagram)
- 4. Step directly backward with left foot:
- 5. Step back, slightly to right, with right;
- Draw left foot up to right, weight on left. 6.

That's all.

Practice the Backward Waltz movement around the room. Start with the right foot backward. At first go very slowly and try to do the six steps without a mistake. Gradually do the movement faster and faster. Spend a few hours in practice to acquire ease and grace.

DO NOT GO ANY FURTHER UNTIL YOU HAVE MASTERED ALL OF THE FOREGOING STEPS.

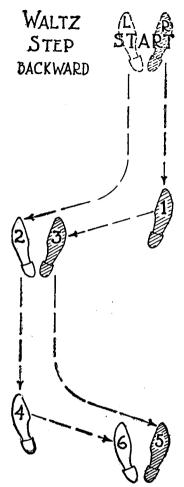

# TO LEARN AND TO TEACH OTHERS

# A Word to Dancing Teachers and to Parents Who Wish to Teach Their Children.

This course is a handy encyclopedia for dancing teachers who want to be sure of teaching correctly. Mothers may learn to dance and at the same time teach their children.

To teach others successfully, you must first master the steps yourself; you should learn both the lady's and gentleman's parts. Teach others the steps just as they are given in this course. Remember that there must be no doubt in your mind as to any part of the information given in this course; you cannot teach others unless you are sure that you really know what you are talking about. If in doubt, simply refer to the instructions as here given. This is one of the advantages of taking this course; you can always refer to it, whereas you are apt to forget oral instruction.

To teach others to dance, commence at the beginning and impart the information to your pupil just as it is given in this book. Ballroom dancing is the same for children as it is for adults. Therefore, the same instructions which are given to grown-ups also apply to the teaching of children.

## THE BOX STEP FOR THE RIGHT WALTZ TURN.

The LADY'S PART IS EXACTLY THE SAME as the man's.

This is one of THE MOST IMPORTANT STEPS IN DANCING. It is the basis for the Waltz and therefore has a direct bearing on the foundation of dancing. The Box Step is very simple, but should be practiced until you can do it rapidly and smoothly.

Stand in the <u>lower</u> right <u>hand</u> corner of the square; heels together and toes outward.

1, Step directly forward with right foot;

2. Step with left foot diagonally across the square to the upper lefthand corner;

3. Draw the right foot up to the left, placing the weight on the right foot. Note that heels are together.

After doing the first three steps of the Box, you have completed one Waltz Step. (You should be standing in the upper left-hand corner of the square.)

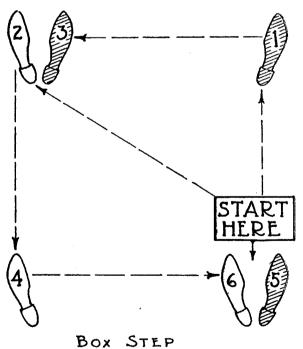

4. Step <u>directly</u> backward with the left foot;

5. With the right foot, step diagonally backward to the lower right hand corner;

6. Draw the left foot up to the right, placing the weight down on the left. That's all.

Now, go back to the beginning at the top of page and do all six steps without stopping. It is amazingly easy. You should practice this step at least an hour. You can learn to do it in five minutes, but you should practice to gain ease and grace.

The Box Step is the basis for the Right Waltz Turn. After you learn the Right Waltz Turn, you will not use the Box Step again. But you must master the Box Step and learn to do it very rapidly in order to do the Right Turn with ease.

#### THE RIGHT WALTZ TURN.

The Right Waltz Turn is simply the Box Step used in turning to the RIGHT. Study the diagram on this page. Go slow! Take nothing for granted, but study each step carefully.

The Right Waltz Turn is exactly the same as the Box Step in the number of movements: the only difference is that in the Right Waltz Turn you  $\underline{\text{TURN}}$  to the right on the FIRST of every three steps. A quarter turn is made on each three steps.

1. As in the Box Step, put your right foot forward and at the same time turn the body 1/4 to the right;

2. Place the left foot forward (to the left) so that it is ALONGSIDE the right foot;

3. Bring the right foot up to the left, placing weight on right foot, (feet together). This makes a quarter turn.

4. Step directly backward with the left foot, at the same time turning the body 1/4 to the right;

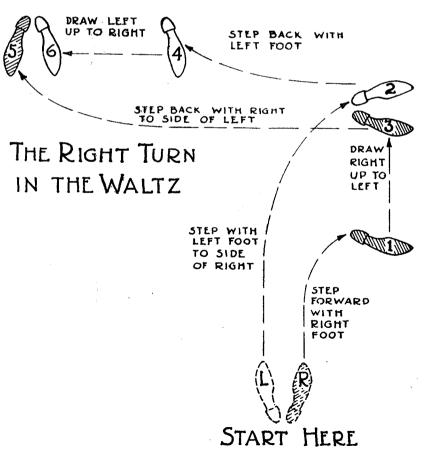

5. Place the right foot alongside the left; (feet apart.)

6. Draw up left foot to right, placing weight down on left foot. Now you have made another quarter turn.

GO BACK TO THE BEGINNING AND DO THE COMPLETE STEP OF SIX COUNTS WITHOUT ANY STOPS. Remember this most important rule: to do the Right Waltz Turn, you begin with the right foot and go FORWARD. You turn a quarter of the way each time on the <u>first</u> and <u>fourth</u> steps. The lady's part in the waltz is EXACTLY the same as the man's. Both do identically the same steps.

The Right Waltz Turn of six counts makes only a HALF To do a COMturn. PLETE turn, simply dance the Right Waltz Turn twice in succession. In other words, do the six steps, then do the same six steps over again without stopping. Each waltz step of 3 counts makes a quarter turn to the right. Twelve steps done continuously will make one complete Waltz turn to the right.

Do not dance to music or with a partner until after at least two hours of practice on this step. If you have difficulty in learning the turn, go back and practice the Box Step. Forget the Box Step only after you master the turn.

## TO PUT THE WALTZ STEPS TOGETHER

In the preceding lesson you learned to make a complete turn to the right in <u>four</u> waltz steps of twelve counts. Go no further until you have mastered <u>that</u> lesson or you will not be capable of understanding the following.

Now we will do the complete Right Waltz Turn in THREE waltz steps instead of four waltz steps.

Simply do the first three waltz steps, beginning with the right foot forward, and as you turn, go a THIRD of the way round on each waltz step instead of making only a quarter turn as done in the preceding lesson. If you can do the turn in four waltz steps, it is just as easy to make a complete turn in three waltz steps.

At the completion of the Right Turn in three waltz steps, you should face the same direction as at the beginning. GO NO FURTHER UNTIL YOU HAVE LEARNED TO MAKE THE COMPLETE WALTZ TURN IN THREE WALTZ STEPS OR NINE COUNTS. Practise turning for about an hour.

You have learned that the Right Waltz Turn is begun with the <u>right</u> foot. As most of the other steps are begun with the left foot, it is not convenient to begin any step with the right foot. The man should always begin with his left foot. Therefore, in order to allow the man to begin with his left foot in making the Right Turn, take one Forward Waltz Step, beginning with the left foot, before making the Right Turn. This Forward Waltz Step, of three counts, will always be used before doing the Right Waltz Turn.

Hereafter, the Right Waltz Turn will consist of FOUR waltz steps: the first waltz step, of three counts, will be done directly forward; the other three waltz steps will be used to make the turn. This makes a total of twelve counts.

## COMBINE THE FORWARD WALTZ MOVEMENT WITH THE RIGHT WALTZ TURN

Begin with the left foot and do the Forward Waltz Movement of six counts. Then do the Right Turn of four waltz steps, twelve counts. Remember that the first waltz step of the Right Turn is a forward movement and is begun with the left foot. (See paragraph above.)

To repeat the entire combination, begin by again doing the Forward Waltz Movement of six counts, then do the Right Waltz Turn of twelve counts.

# THE BOX STEP FOR THE LEFT WALTZ TURN.

This Box Step, in which you begin by going forward with the LEFT foot, is the basis for the LEFT Waltz Turn. If you can do this Box Step very rapidly, turning will be very easy for you. When doing the turns you do not have time to think of your step: you must think of your direction and the step must be done almost mechanically. Therefore it is essential to MASTER the Box Step which acts as the basis for the turn to the left.

1. Step directly forward with left foot;

2. Step to right hand corner of box with right foot;

3. Close left foot up to the right, weight on left. This completes one Waltz Step.

4. Step straight back with right foot;

5. Step to the lower left hand corner of the square with left foot;

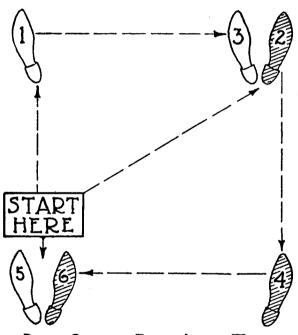

6. Close right foot up to left foot, weight on right.

Repeat the above movement of six counts until you can do it easily and rapidly. Practice the Box Step until you can do it without thinking about the step. Acquire mechanical perfection before advancing to the next step.

If you have a phonograph handy, practice with music for about 30 minutes. Do not go to the Left Turn until you can do this Box Step perfectly.

Remember that each time you count a step, your foot must be placed on the floor and your entire weight must come down on it. <u>Always take one</u> <u>step at a time</u> and never two steps in succession with the same foot.

Remember that the Box Step is only a preliminary step for the Left Turn and after learning the turn, the Box Step is not used in dancing with a partner.

BOX STEP FOR LEFT TURN

# THE LEFT WALTZ TURN.

This is the reverse of the Right Turn. The Left Turn is simply the Box Step used in turning. Doing the Box Step, turn a <u>quarter</u> of the way on the <u>First</u> and <u>Fourth</u> counts just as you did in the Right Turn. Following is a more detailed description showing how the Box Step is used to make the Left Turn:

1. Step forward with left foot, turning 1/4 to left to face West Wall;

2. Step forward with right foot placing it to right;

3. Close left up to right, weight on left;

This completes a quarter turn.

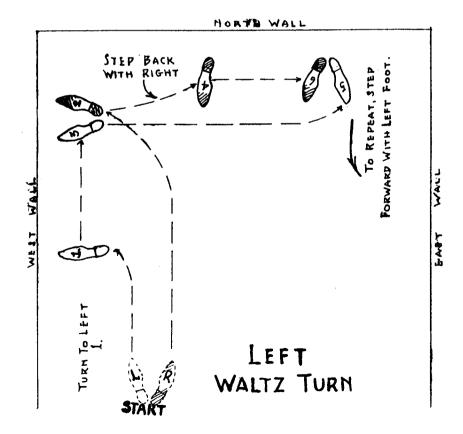

4. Step backward with right foot, making a quarter turn to left, your back is to the North Wall.

5. Bring the left foot alongside of right, feet apart, weight on left;

6. Close right up to left foot, weight on right;

Six steps make only a <u>half</u> Waltz Turn. To complete the turn, <u>repeat</u> the entire movement of six counts. Simply step forward again with left foot and face the East Wall, 7, 8, 9. (7, 8, 9 is the same as 1, 2, 3.)

A complete turn takes <u>four</u> <u>waltz</u> <u>movements</u>, or twelve counts. You make a quarter turn on each three steps.

#### THE ONE STEP.

Learn the Fox Trot and the Waltz before learning the One Step. Because the One Step is faster in tempo than the Fox Trot, it is not as easy for the beginner, but after learning the Waltz and the Fox Trot, it will be comparatively simple.

In the larger cities the One Step is not as popular as in former days. In the smaller cities, however, it is still a favorite dance.

Although at one time the One Step contained twenty or more variations, most of these steps have been discarded and only a few are left. The most important and the most popular steps in the One Step are the Waltz steps. The Forward Waltz Step and the Left and Right Waltz turns are the most commonly used steps done by the better dancers.

By doing the Waltz steps in the One Step, you kill two birds with one stone. Instead of having to learn many variations in the One Step, you can do the very same steps in the One Step which you learn in the Waltz.

Begin by learning to walk to One Step time. This is almost the same as a March. You simply walk briskly, about two steps a second, and take very long steps on the toes. The man should practice walking forward around the room in the Line of Direction, and the lady should practice by walking backwards.

After practicing the walking step backward for about thirty minutes, go to the next page and learn the Cut Step. After learning the Cut Step, go to the Waltz again and learn to do the Waltz steps to the One Step time. This is easy if you know the Waltz steps. There is no change in the time of the step. You simply take one step to each beat of the music. If you know the Waltz steps, you will have no difficulty in dancing them to the One Step music.

You may dance anything to One Step time which you learn in the Waltz.

# THE CUT STEP IN THE ONE STEP

MAN'S PART: Face the line of direction, start with the left foot and walk forward seven steps; on the eighth, draw up the right foot behind the left foot, lifting the left slightly off the floor. (Note that the Cut Step is similar to the Chasse in the Fox Trot.)

Now, let's do it slowly; walk forward, beginning with left foot and count, 1, 2, 3, 4, 5, 6, 7, then draw up the right foot behind the left, placing the weight down on the right foot (at the same time lift the left foot slightly off the floor.) Look at the diagram and see how the right foot is placed behind the left foot on the eighth count.

Remember to start each time with the left foot. Read the above over again and do it slowly at first. After a little practice you will be amazed at the ease with which you will learn. As you progress, the steps will become easier to you. Spend thirty minutes practicing this step, going around the room in the line of direction.

4

6

#### THE LADY'S PART: First read the man's part.

The lady goes backward and begins with her right foot. Walk seven steps and draw the left foot in front of the right on the eighth count, lifting the right foot slightly off the floor.

Man's Part

2

#### NOTES

Do not read any further until you can do the above step perfectly. Try to do it ten times in succession without a single mistake. Remember to keep to the right and follow along the line of direction.

Do this step around the room, for at least 20 minutes. By practicing this step <u>now</u>, you are laying a good foundation and you are acquiring ease and grace. Your work <u>now</u> will bring in dividends of pleasure later.

AFTER MASTERING THE CUT STEP, REVIEW THE WALTZ AND DO THE WALTZ VARIATIONS TO ONE STEP TIME.

#### THE SHIFT STEP IN ONE STEP

It is called the Shift Step because during the last part of the step, the weight is shifted from one foot to the other while standing almost on the same spot.

## THE MAN'S PART:

1. Step directly forward with the left foot;

2. Bring the right foot diagonally forward (feet 20 inches apart);

3. Draw the left foot up to the right (heels together);

4. Rise up on the left foot and shift the weight to the right foot, taking left off the floor.

Begin with the left foot, repeat this movement of four counts.

### THE LADY'S PART:

1. Begin with the right foot and step directly backward;

2. Draw the left foot back and place it about twenty inches to the left side of the right foot;

3. Draw up the right foot to the left;

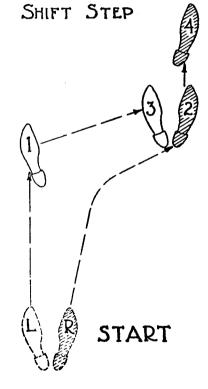

4. Rise on the right foot and shift the weight to the left foot, taking right off the floor.

The lady always begins with right foot. THE MAN STARTS WITH HIS LEFT.

Remember to rise up high on the third count and drop or shift the weight to the fourth count.

Do this step around the room, counting 1, 2, 3, 4, at least thirty minutes.

When leading, walk four steps before doing the Shift Step.

### THE ROCKING STEP

The Rocking Step in the One Step is characterized by a brisk, "snappy" walking step.

#### MAN'S PART:

Begin with left foot, walk forward four long slow steps, 1, 2, 3, 4; then,

Step forward on left, 5;

Step back on right, 6, placing weight on right;

Rock forward to left, 7, weight on left;

Close right foot up to left, weight on right, 8, taking left foot slightly off the floor.

## LADY'S PART:

Begin with right foot, take four long slow steps backward, 1, 2, 3, 4; then,

Step back on right, 5;

Step forward on left, 6, placing weight on left;

Rock back on right, 7, weight on right;

Close left up to right, weight on left, 8, taking right foot slightly off the floor.

# THE RIGHT TURN IN THE ONE STEP

Take four long walking steps before doing the turn.

Eight steps are taken to complete one full turn to the right. Study the diagram a few minutes. Note carefully the direction in which the body moves.

Observe that for the first two steps the man goes forward, left foot, 1; right foot, 2;

Beginning with left, then walk backward four steps (turning meanwhile as in diagram.)

Then walk forward two steps, left, 1; right 2.

Bear in mind that the object of this step is to make a complete turn to the right. This is done in a total of eight steps.

The best way of learning this step is to draw on the floor a diagram 12 feet long. Then walk the steps on the diagram.

The <u>lady</u> begins with her right foot and goes backward two steps, then walks forward four steps, and walks backward for the last two steps.

When you go forward, step <u>straight ahead.</u> Do not be afraid of stepping on your partner's feet. Walk toward his feet when you go forward; do not try to avoid them. If he can dance, he will get them out of your way.

You do not need music, but if there is a phonograph handy, walk around to any good One Step AFTER YOU HAVE LEARNED THE STEP. Do not dance with a partner until you are sure that you know the step <u>perfectly.</u> Take two walking steps a second.
